

AQUALGAE SACCHARINA

INCI: *Saccharina latissima* extract, *Potassium sorbate*, *Sodium benzoate*, *Citric acid*

AQUALGAE RANGE

Aqualgae is a natural, organic seaweed water sourced from algae harvested on the Brittany coast. It is obtained through a gentle evaporation process that recovers 100% of the water from the algae, making it a sustainable and eco-friendly alternative to pure water in cosmetic formulations. Certified 99.6% natural and 99.1% organic by ECOCERT, it supports local marine resources and circular economies. Aqualgae enhances the natural content of cosmetics, offering benefits for both consumers and the environment by upcycling a previously discarded by-product.

PROPERTIES

AQUALGAE Saccharina is obtained from *Saccharina latissima*, a brown algae known for its purifying properties.

This biological water is perfect for protecting the skin against external aggressions such as pollution and UV radiation. *Saccharina* helps in formulating products that cleanse, purify, and shield the skin, making it an ideal choice for urban skincare.

TECHNICAL DATA	
APPEARANCE	LIMPID LIQUID
COLOUR	COLOURLESS
RECOMMENDED DOSAGE	10 – 100%
NATURALITY INDEX	0.996
ORGANIC INDEX	0.991
